ALITA CHEAT SHEET

For people who will never read a manual. Look at the pictures. Click the same thing.

> Ugh, fine. Pictures only. Wake me when it's answered.

1 JUST OPEN IT

That's it?!

Click your ALITA link. Nothing to install. Two big tabs: B = map + Graph Chat, A/B = both chats side by side.

2 KEY IN. ONCE.

Paste your OpenRouter key, hit Save. Done forever: your browser remembers it.

3 PICK A FLOWER

Too lazy? Skip it.

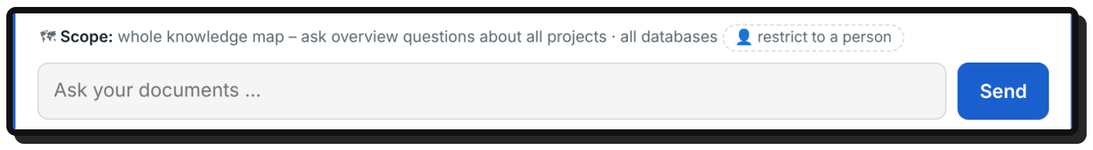

Each flower is a database. Click one or more. Pick none = search everything.

4 JUST ASK

SEND!

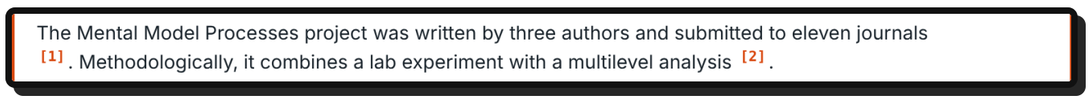

Document Chat (A): type a normal question, press Send, lean back.

5 CHECK THE RECEIPTS

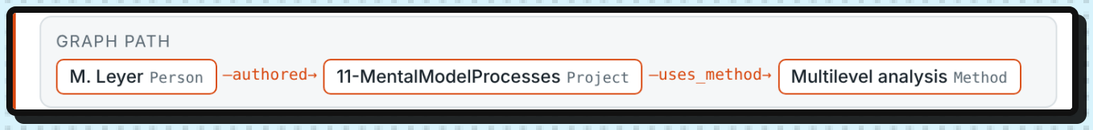

Trust, but click.

Those little [1] [2] are sources. Click one to see the exact passage. Copy takes answer + sources.

6 WHO DID WHAT?

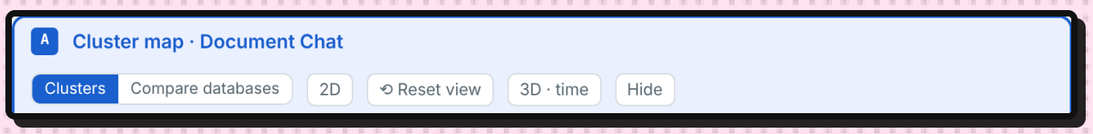

People, projects, methods, who cites whom: ask Graph Chat (B). It shows the path it followed.

7 POKE THE MAP

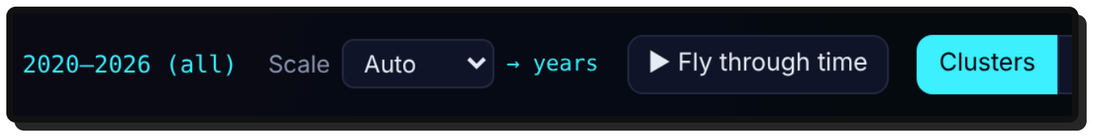

Lost? Reset view.

Hover a dot = peek. Click a dot = open the doc. Click a cluster = both chats only ask about that one.

8 3D JOYRIDE

Hit "3D · time". Fly: W A S D, leave: Esc. Too lazy to steer? "Fly through time".

9 FEED IT

Click + Add new data **then pick flower, kind, drop files, done.**

STUCK?

Weird answer? Too many filters. Click Clear selection.

Chat confused? Click + New and ask again.

Lazy pro move: type `@db:Magnolia` right in your question.

ALITA can be wrong. That's why step 5 exists.
