ALITA CHEAT SHEET

For people who will never read a manual. Look at the pictures. Click the same thing.

Ugh, fine. Pictures only. Wake me when it's answered.

1 JUST OPEN IT

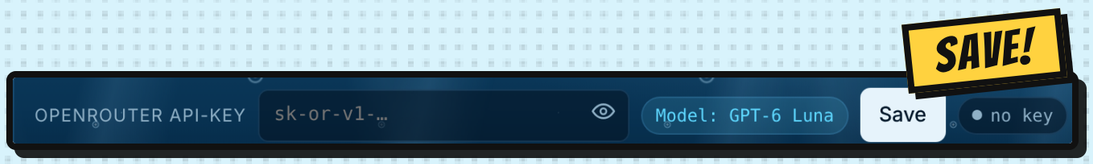

That's it?!

Open your ALITA link; sign in with an invitation code or mailcode. B = map + Graph Chat, A/B = both chats.

2 KEY IN. EACH VISIT.

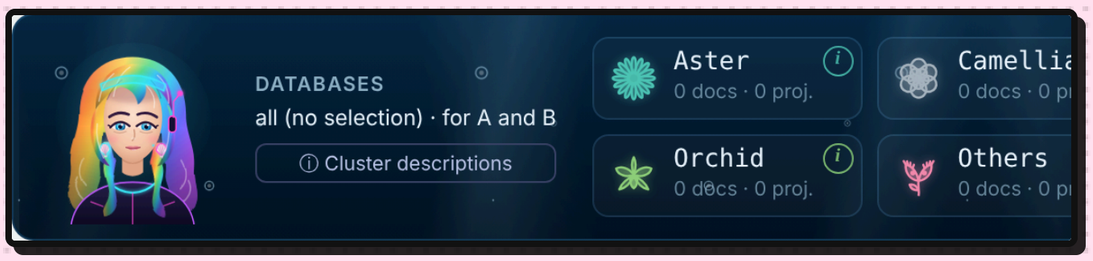

Paste your own OpenRouter key, hit Save. It stays only until you reload or close the page.

3 PICK A FLOWER

Too lazy? Skip it.

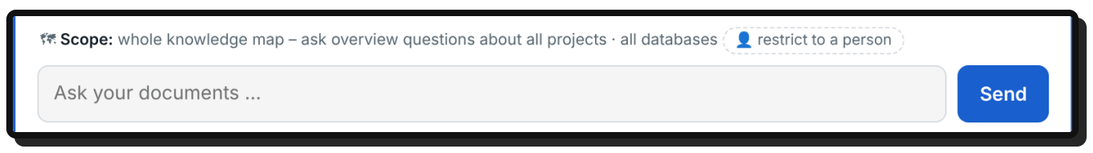

Each flower is a database. Click one or more. Pick none = search everything.

4 JUST ASK

SEND!

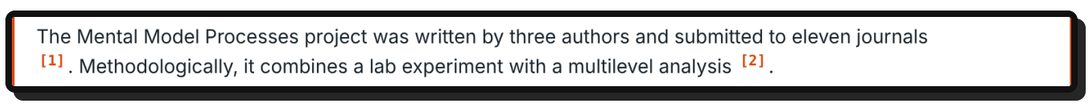

Document Chat (A): type a normal question, press Send, lean back.

5 CHECK THE RECEIPTS

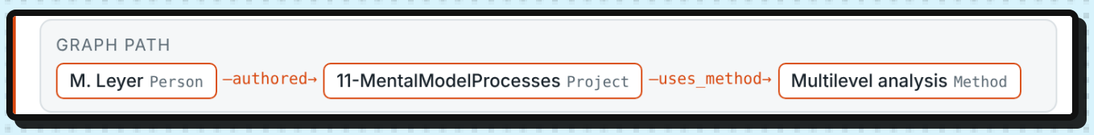

Trust, but click.

Those little [1] [2] are sources. Click one to see the exact passage. Copy takes answer + sources.

6 WHO DID WHAT?

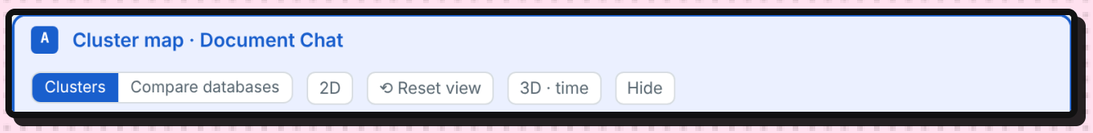

People, projects, methods, who cites whom: ask Graph Chat (B). It shows the path it followed.

7 POKE THE MAP

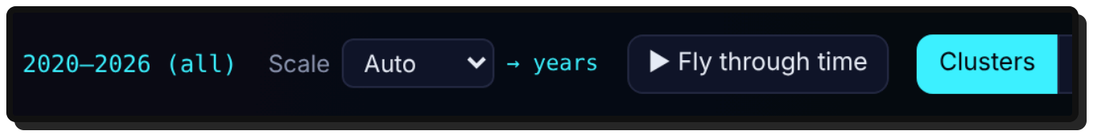

Lost? Reset view.

Hover a dot = peek. Click a dot = open the doc. Click a cluster = both chats only ask about that one.

8 3D JOYRIDE

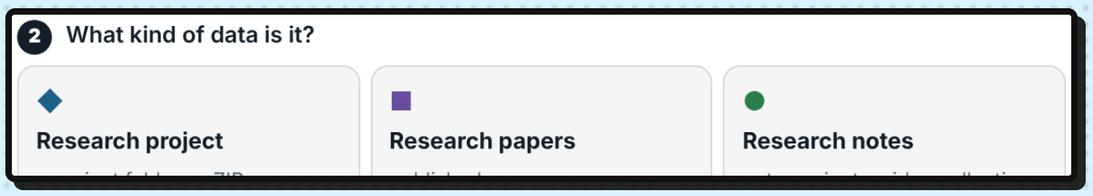

Hit "3D · time". Fly: W A S D, leave: Esc. Too lazy to steer? "Fly through time".

9 ADMINS: FEED IT

Click + Add new data

then pick flower, kind, drop files. Readers and reviewers cannot upload.

STUCK?

Weird answer? Too many filters. Click Clear selection.

Chat confused? Click + New and ask again.

Lazy pro move: type `@db:Magnolia` right in your question.

ALITA can be wrong. That's why step 5 exists.
